

Illustrated checklist of newly described (2006–2016) land and freshwater Gastropoda from Brazil

CARLOS J. BIRCKOLZ¹, RODRIGO B. SALVADOR^{2,3,*}, DANIEL C. CAVALLARI⁴ & LUIZ R. L. SIMONE⁴

Abstract

A list of Brazilian terrestrial and freshwater gastropod species and genera described from 2006 to 2016 is presented, updating the previous catalogue of SIMONE (2006). Colored photographs of type specimens, as well as information on type material, distribution and taxonomy are also provided. The list encompasses 42 recently described species, largely pulmonates, including 39 terrestrial, and three freshwater taxa. New genera are: *Syneancylus* GUTIÉRREZ GREGORIC 2014; *Clanispira* SIMONE & CASATI 2013; *Habeas* SIMONE 2013; *Kora* SIMONE 2012; *Olympus* SIMONE 2010; *Spiripockia* SIMONE 2012 and *Vegrandinia* SALVADOR, CUNHA & SIMONE 2013. The appendix lists native species whose known geographical ranges in Brazil have been extended considerably during this period, as well as those previously unrecognized in Brazil.

Keywords: Caenogastropoda, Pulmonata, type locality, type specimens.

Introduction

In the late 1940s, FREDERICO LANGE DE MORRETES compiled the first comprehensive inventory of Recent Brazilian mollusks (MORRETES 1949). It encompassed molluscan species from every environment and received subsequent corrections and expansions (MORRETES 1953, OLIVEIRA & CASTRO 1979). This first catalog listed nearly 1,500 species, over a third of which were terrestrial and freshwater gastropods. The species lists published in the following decades mostly consisted of short regional reports and occurrence notes, with the possible exception of OLIVEIRA et al. (1981). Their catalogue, however, was based on the institutional collection of the Universidade Federal de Juiz de Fora (UFJF), which also harbors exotic specimens.

SALGADO & COELHO (2003) published the first broad Brazilian species list since MORRETES (1949). It was restricted to terrestrial gastropods, comprising 590 species,

but excluding slugs (e.g., Veronicellidae). Three years later, SIMONE (2006) published an extensive catalogue book of Brazilian terrestrial and freshwater mollusks, with 1,060 valid species. Most of them (948) were gastropods. Unlike its predecessors, the book by SIMONE offered an extensive assemblage of colored specimen photographs, mostly including type specimens. It also included information on distribution and an exhaustive bibliographical compilation on each species.

Not many Brazilian terrestrial gastropods have been described since the 1950s. It was not until the 2010s that the number of described species increased significantly. In this paper, we compile a list of Brazilian terrestrial and freshwater gastropod species described in the decade following SIMONE's (2006) catalog, up to 2016. We take the opportunity to provide information on species distribution, types, relevant taxonomic changes, and corrections.

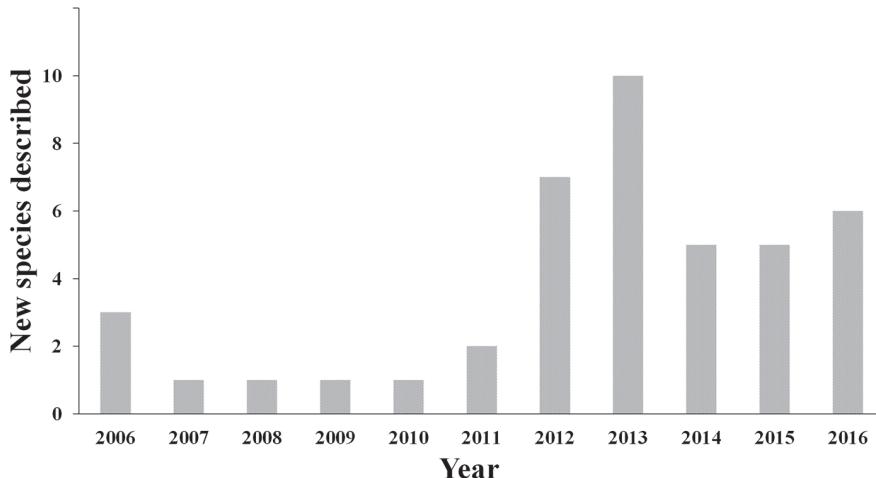

Figure 1. Chart showing the number of new species of land and freshwater gastropods described from Brazil between the years 2006 and 2016 (up to October 10, 2016).

The species list presented here was compiled from the specialized literature, including the original descriptions and any further papers mentioning the species, and figured (preferably by the holotypes). In some cases, the original description fails to give a catalog number for the type material; these numbers are provided here whenever possible according to the institutions' online databases, published type catalogs (e.g., PIMENTA et al. 2014, BREURE & ABLETT 2015) or the collections' curators (personal communication). The systematic classification used here follows BOUCHET et al. (2005), with some subsequent modifications (e.g., BREURE & ROMERO 2012, for the Orthalicoidea).

From 2006 to 2016, 39 new terrestrial and three freshwater snail species from Brazil were described (see Fig. 1 for year-by-year numbers). These are listed below, in systematic order, with additional data on their type localities, distribution, type material and other remarks of broader interest. In the same period, seven new genera were erected: *Syneancylus* GUTIÉRREZ GREGORIC 2014; *Clinispira* SIMONE & CASATI 2013; *Habeas* SIMONE 2013; *Kora* SIMONE 2012; *Olympus* SIMONE 2010; *Spiripockia* SIMONE 2012; *Vegrandinia* SALVADOR, CUNHA & SIMONE 2013. Nearly all of these genera were created to house the new species, with the single exception of *Vegrandinia*. This new subulinid genus was erected to accommodate *Bulimulus trindadensis* BREURE & COELHO 1976, a species endemic to Trindade Island, which lies about 1,140 km off the southeast part of mainland Brazil (SALVADOR et al. 2013).

Besides the new species described, in the same period there were reports of several species already known from Brazil that greatly extended their known geographical ranges. These species, and their new distribution compared to that reported by SIMONE (2006), are listed in the Appendix. The Appendix also lists species already described by 2006, but recognized only subsequently as occurring natively in Brazil. It is also worthwhile to highlight that none of the species listed as valid by SIMONE (2006) were brought into synonymy since then.

The following abbreviations are used throughout the text.

Institutions:

ANSP	Academy of Natural Sciences, Drexel University (Philadelphia, USA)
FNMH	Field Museum of Natural History (Chicago, USA)
ICMBio	Instituto Chico Mendes de Conservação da Biodiversidade (Brasília, Brazil)
MACN	Museo Argentino de Ciencias Naturales Bernardino Rivadavia (Buenos Aires, Argentina)
MCN-FZB	Museu de Ciências Naturais da Fundação Zoobotânica do Rio Grande do Sul (Porto Alegre, Brazil)
MCP	Museu de Ciências e Tecnologia, Pontifícia Universidade Católica do Rio Grande do Sul (Porto Alegre, Brazil)
MLP	Museo de La Plata (La Plata, Argentina)
MNHN	Musé National d'Histoire Naturelle (Paris, France)
MNRJ	Museu Nacional da Universidade Federal do Rio de Janeiro (Rio de Janeiro, Brazil)

ZMH	Zoologisches Museum der Universität Hamburg (Hamburg, Germany).

Shell Measurements:

D	shell width (greatest diameter)
H	shell height
L	body length (slugs).

Museum Material:

sh.	shell (empty shell only)
spc.	specimen (shell and soft body preserved in ethanol 70% or 96%).

Systematics

- Caenogastropoda
- Superfamily Cyclophoroidea
- Family Diplommatinidae
- Genus *Adelopoma* DOERING 1884
- Adelopoma paulistanum* MARTINS & SIMONE 2014
- Fig. 2
- 2014 *Adelopoma paulistanum* MARTINS & SIMONE: 766, figs. 1–35.
- Type locality: Brazil. São Paulo state; São Paulo: Burle Marx Park, 23°38'05.61"S 46°43'24.24"W.
 Distribution: Known only from type locality.
 Type material: Holotype: MZSP 116256. Paratypes: MNRJ 26763 (3 sh.), MZSP 106109 (14 sh.), MZSP 106110 (16 sh.), MZSP 106112 (34 sh.), MZSP 106114 (18 spc.), MZSP 206115 (1 spc.), MZSP 106116 (2 spc.), MZSP 106117 (16 spc. + 2 radulae [SEM preparations]), USNM unnumbered (3 sh.).
- Remarks: This species was described from a small park in the city of São Paulo. The type locality was threatened by real estate development and SIMONE (2015a) argued that the species should have the status of “endangered”.
- Genus *Habeas* SIMONE 2013
- Habeas corpus* SIMONE 2013
- Fig. 3
- 2013 *Habeas corpus* SIMONE: 520, figs. 1–6, 16–18.
- Type locality: Brazil. Bahia state; Carinhanha: Serra do Ramalho, Gruna das Três Cobras (“Três Cobras Cave”; 13°37'07.6"S 43°45'11.5"W, ca. 400 m elevation).
 Distribution: Also known from the nearby Gruna do Cesário (“Cesário Cave”), in the same mountain range.
 Type material: Holotype: MZSP 110000. Paratypes: MZSP 106774 (1 sh.), MZSP 106745 (1 sh.).
- Remarks: Cavernicolous species. Type species of the genus.
- Habeas data* SIMONE 2013
- Fig. 4
- 2013 *Habeas data* SIMONE: 520, figs. 7–10, 16, 18.
- Type locality: Brazil. Bahia state; Carinhanha: Serra do Ramalho, Gruna do Cesário (“Cesário Cave”; 13°31'06.1"S 43°38'26.2"W, ca. 400 m elevation).
 Distribution: Also known from the nearby Gruna Vila Nova (“Vila Nova Cave”), on the same mountain range.
 Type material: Holotype: MZSP 106810 (fragmented). Paratypes: MZSP 106814 (2 sh.), MZSP 109965 (1 sh.), MZSP 110159 (1 sh.).
- Remarks: Cavernicolous species.
- Remarks: Cavernicolous species.
- Habeas priscus* SIMONE 2013**
- Fig. 5
- 2013 *Habeas priscus* SIMONE: 522, figs. 11–17.
- Type locality: Brazil. Bahia state; Central, Boqueirão do Maxixe (13°46'51.6"S 44°02'18.7"W).
 Distribution: Known only from type locality.
 Type material: Holotype: MZSP 103044.
- Superfamily Rissooidea
- Family Pomatiopsidae
- Genus *Spiripockia* SIMONE 2012
- Spiripockia punctata* SIMONE 2012
- Fig. 6
- 2012a *Spiripockia punctata* SIMONE: 516, figs. 1–33.
- Type locality: Brazil. Bahia state; Serra do Ramalho karst area, Middle São Francisco River Basin, Lapa dos Peixes Cave (13°49'21.78"S 43°57'24.39"W).
 Distribution: Known only from type locality.
 Type material: Holotype: MZSP 105000. Paratypes: MNRJ 30503 (1 spc.), MZSP 104435 (19 spc.), USNM 1182929 (1 spc.).
- Remarks: Cavernicolous species. Type species of the genus. The registry number of the USNM paratype provided in the original paper is wrong; the correct number is shown above.
- Pulmonata
- Hygrophila
- Superfamily Chilinoidea
- Family Chilinidae
- Genus *Chilina* GRAY 1828
- Chilina iguazuensis* GUTIÉRREZ GREGORIC & RUMI 2008
- Figs. 58–59
- 2008 *Chilina iguazuensis* GUTIÉRREZ GREGORIC & RUMI: 324, figs. 1–7.
- Type locality: Nandú rapid, lower (“upper” in the original) Iguazu River, Iguazú National Park (border between Argentina, Misiones province, and Brazil, Paraná state; 25°42'S 54°25"W).
 Distribution: Known from several rapids on the lower Iguazu River.
 Type material: Holotype: MLP 12526. Paratypes: MACN In37175, MLP 12527 (5 spc.), MLP 12528 (7 spc.).

Superfamily Planorboidea

Family Planorbidae

Genus *Syneancylus* GUTIÉRREZ GREGORIC 2014

Syneancylus rosanae (GUTIÉRREZ GREGORIC 2012)

Figs. 7–8

2012 *Anancylus rosanae* GUTIÉRREZ GREGORIC: 109, figs. 2–18.

2014 *Syneancylus rosanae* – GUTIÉRREZ GREGORIC: 243.

Type locality: Ñandú rapid, lower (“upper” in the original) Iguazu River, Iguazú National Park (border between Argentina, Misiones province, and Brazil, Paraná state; 25°42'S 54°25"W).

Distribution: Known from several rapids on the lower Iguazu River.

Type material: Holotype: MLP 13219. Paratypes: MLP 13220 (7 spc.).

Remarks: Type species of the genus. It was originally described in the new genus *Anancylus* GUTIÉRREZ GREGORIC 2012 [non THOMSON 1864; Coleoptera], a preoccupied name. *Syneancylus* is the replacement name (GUTIÉRREZ GREGORIC 2014).

2015b *Kora iracema* SIMONE: 54, figs 15–20.

2016 *Drymaeus iracema* – SALVADOR & SIMONE: 3.

Type locality: Brazil. Bahia state; São Desidério, Gruta do Morro dos Tapuias (“Tapuias Hill Cave”; 12°30'S 45°03'W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 104964.

Remarks: New generic assignment according to SALVADOR & SIMONE (2016).

***Drymaeus terreus* (SIMONE 2015)**

Fig. 15

2015b *Kora terrea* SIMONE: 51, figs 1–5.

2016 *Drymaeus terreus* – SALVADOR & SIMONE: 3.

Type locality: Brazil. Minas Gerais state; Presidente Olegário, Povoado de Galena (18°25'S 46°25'W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 106215.

Remarks: New generic assignment according to SALVADOR & SIMONE (2016).

Genus ***Kora*** SIMONE 2012

Kora corallina SIMONE 2012

Fig. 16

2012b *Kora corallina* SIMONE: 432, figs. 1–8.

Type locality: Brazil. Bahia state; Santa Maria da Vitória (ca. 13°24'S 44°12'W, ca. 460 m elevation).

Distribution: Known only from type locality. The occurrence from Carinhanha reported in SIMONE (2015b) is actually a congener, *K. rupestris*, as discussed by SALVADOR & SIMONE (2016).

Type material: Holotype: MZSP 103910. Paratypes: MZSP 103911 (1 sh.), MZSP 103912 (1 sh.), MZSP 103913 (32 sh.), MZSP 104033 (>50 sh.), MNHN IM-2012-37362 (2 sh.), MNRJ 30377 (2 sh.), USNM 1157009 (2 sh.).

Remarks: Type species of the genus.

Kora nigra SIMONE 2015

Fig. 17

2015b *Kora nigra* SIMONE: 53, figs 6–13, 21.

Type locality: Brazil. Bahia state; Carinhanha, Serra do Ramalho, Gruna do Cesário (“Cesário Cave”; 14°19'S 43°47'W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 106232. Paratypes: MZSP 106241 (1 sh.), MZSP 106250 (2 sh.), MZSP 104831 (5 sh.).

Kora rupestris SALVADOR & SIMONE 2016

Fig. 18

2016 *Kora rupestris* SALVADOR & SIMONE: 3, figs. 4–11, 15–17.

Type locality: Brazil. Bahia state; Carinhanha municipality (city center coordinates: 14°18'18"S 43°45'54"W), under rocks on Canabrava Hill.

Distribution: Brazil. Bahia state; Carinhanha, Coribe and Serra do Ramalho municipalities.

Type material: Holotype: MZSP 121416. Paratypes: MZSP 121441 (2 sh.).

Genus ***Leiostracus*** ALBERS 1850

Leiostracus carnavalescus SIMONE & SALVADOR 2016

Figs. 19–21

2016 *Leiostracus carnavalescus* SIMONE & SALVADOR: 12, figs. 2–27, 53–67.

Type locality: Brazil. Minas Gerais state; Nanuque municipality, small fragment of Atlantic rainforest close to Mucuri River (ca. 17°51'S 40°23'W, ca. 120 m of elevation).

Distribution: Brazil. Minas Gerais state: Nanuque and Mantena municipalities. Espírito Santo state: Pinheiros and Sooretama municipalities.

Type material: Holotype: MZSP 106177. Paratypes: MZSP 106178 (14 spc.), 106179 (24 sh.).

Figure 42. *Obeliscus boitata*, holotype (MZSP 106169; H = 50.3 mm, D = 11.9 mm). Figure 43. *Euglandina irakita*, holotype (MZSP 97238; H = 39.2, D = 16.7 mm). Figures 44–46. *Streptartemon molaris*, holotype (MZSP 112451; H = 8.7 mm, D = 5.1 mm). Figure 47. *Megalobulimus amandus*, holotype (MZSP 103917; H = 78.9 mm, H = 50.0 mm). Figure 48. *Megalobulimus jaguarunensis*, holotype (MZSP 118302; H = 60.3 mm, D = 28.8 mm).

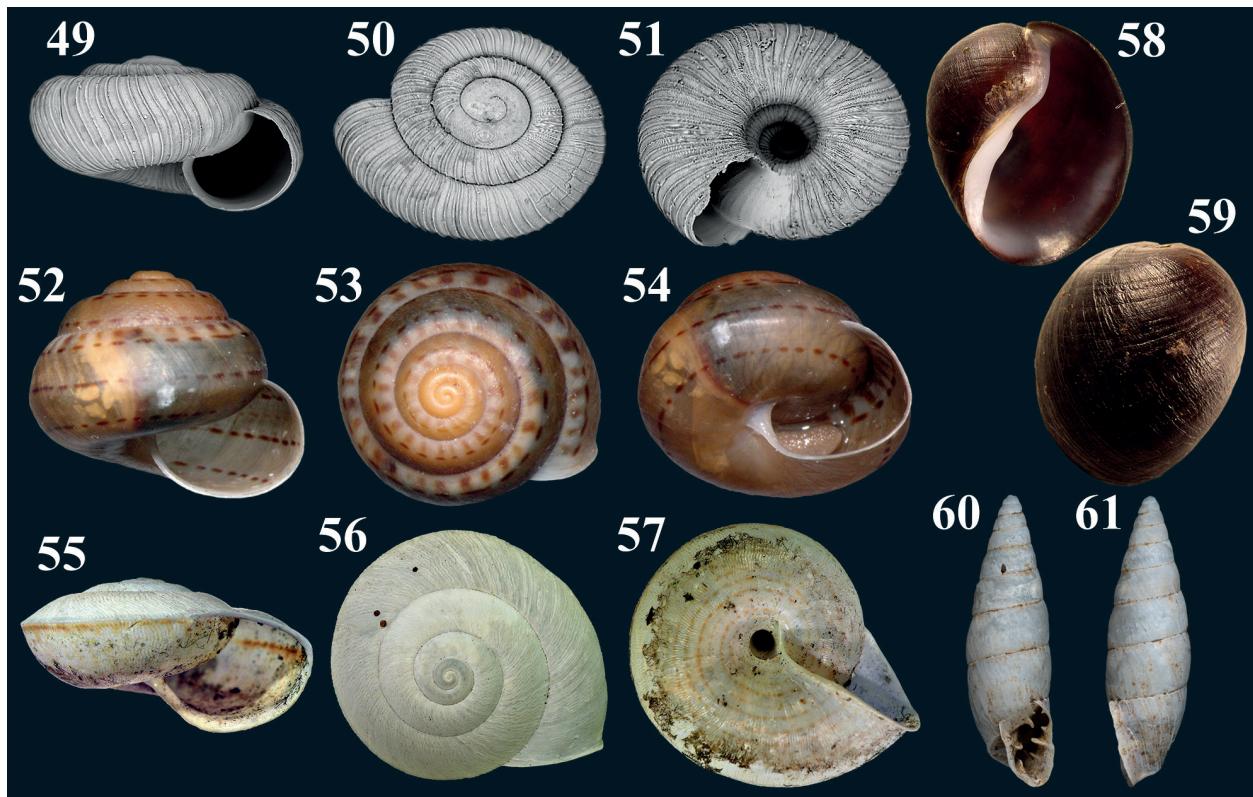

Figure 49. *Radiodiscus sanchicoensis*, paratype (MCP 6707, H = 0.9 mm, D = 1.6 mm). Photograph provided by Sergio Miquel. Figure 50. *Radiodiscus sanchicoensis*, holotype (MCP 6895, D = 1.4 mm). Photograph provided by Sergio Miquel. Figure 51. *Radiodiscus sanchicoensis*, paratype (MCP 6787, D = 1.6 mm). Photograph provided by Sergio Miquel. Figures 52–54. *Olympus nimbis*, holotype (MZSP 87151; H = 15.7 mm, D = 13.1 mm). This shell presently has a hole through which the soft body was extracted for anatomical examination. Figures 55–57. *Solaropsis alcobacensis*, holotype (MZSP 107964; H = 16.3 mm, D = 33.2 mm). Figures 58–59. *Chilina iguazuensis*, holotype (MLP 12526; H = 18.1 mm, D = 14.9 mm). Photograph provided by Diego E. Gutiérrez Gregoric. Figures 60–61. *Bahiensis ribeirensis*, holotype (MZSP 120774; H = 21.3 mm, D = 5.0 mm).

Type locality: Brazil. Espírito Santo state; area in the vicinity of the Rio Doce (“Doce River”).

Distribution: Known only from type locality.

Type material: Holotype: SMF 25876.

Remarks: Species described from a museum specimen collected in 1914. The type locality, along with a large portion of surrounding land has suffered a grave environmental disaster in 2015. The collapse of a dam in the municipality of Mariana flooded the area along the course of the Doce River with silt and possibly toxic mining waste. The impact of this event on the local fauna, including *L. faerie*, is yet to be fully assessed.

Leiostracus fetidus SALVADOR & CAVALLARI 2014

Fig. 23

2014a *Leiostracus fetidus* SALVADOR & CAVALLARI: 40, figs. 2–8.

Type locality: Brazil. Bahia state; Atlantic Rainforest fragment near the city of Canavieiras (15°40'S 39°02'W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 112123. Paratypes: MZSP 107577 (13 sh.), SMNS ZI0077108 (2 sh.).

Genus *Oxychona* MÖRCH 1852

Oxychona maculata SALVADOR & CAVALLARI 2013

Fig. 24

2013 *Oxychona maculata* SALVADOR & CAVALLARI: 315, figs. 2–11.

Type locality: Brazil. Bahia State; Ilhéus municipality (14°47'S 39°02'W).

Distribution: Brazil. Bahia state; Ilhéus and Itapetinga municipalities.

Type material: Holotype: MZSP 108005. Paratype: MZSP 74500.

Oxychona michelinae PORTO, ROCHA FILHO, JOHNSSON & NEVES 2016

Fig. 25

2016 *Oxychona michelinae* PORTO, ROCHA FILHO, JOHNSSON & NEVES: 106, figs 2A–F, 3A–D.

Type locality: Brazil. Bahia State; Igrapiúna municipality, Michelin Ecological Reserve (13°47'03"S 39°10'21"W).

Distribution: Known only from type locality.

Type material: Holotype: MZUFBA 053. Paratypes: MZUFBA 054 (3 sh.), MZSP 116210 (1 sh.).

Family Megaspiridae

Genus *Thaumastus* ALBERS 1860

Thaumastus caetensis PENA, SALGADO & COELHO 2011

Fig. 26

2011 *Thaumastus (Thaumastus) caetensis* PENA, SALGADO & COELHO: 534, figs. 11–21.

Type locality: Brazil. Minas Gerais state; Caeté municipality, Serra da Piedade (“Piedade Hill”; 19°49'19"S 43°40'46"W).

Distribution: Brazil. Minas Gerais state; Caeté and Catas Altas municipalities (VASCONCELOS & PENA, 2012).

Type material: Holotype: MNRJ 8097. Paratypes: MNRJ HSL7810 (1 sh.), MNRJ 3115 (3 sh.), MNRJ 8098 (3 sh., soft parts), MNRJ 8098 (2 sh., soft parts, histological slides), MNRJ 8100 (1 sh.), MNRJ 8101 (1 spc.), MNRJ 9806 (12 spc., soft parts), MZSP 39388 (1 sh.), ZMH 2966 (1 sh.).

Remarks: The paratypes from the ANSP and MNHN collections (according to PENA et al. 2011: ANSP unnumbered, 1 sh., and MNHN unnumbered, 2 sh.) are missing and were likely not received (PAUL CALLOMON, PHILIPPE MAESTRATI and VIRGINIE HÉROS, personal communications, 2016).

Thaumastus parvus PENA, SALGADO & COELHO 2011

Fig. 27

2011 *Thaumastus (Thaumastus) parvus* PENA, SALGADO & COELHO: 532, figs. 1–10.

Type locality: Brazil. Minas Gerais state; Belo Horizonte, Mangabeiras Park, Serra do Curral (“Curral Hill”; 19°57'15.00"S 43°55'21.77"W).

Distribution: Brazil. Minas Gerais state; Belo Horizonte and Nova Lima municipalities.

Type material: Holotype: MNRJ 8107. Paratypes: MNRJ 8102 (soft parts), MNRJ 8103 (8 sh., soft parts), MNRJ 8104 (2 sh.), MNRJ 8105 (9 sh.), MNRJ 8106 (4 sh., 1 spc., soft parts, histological slides), MNRJ 8108 (32 sh.), MNRJ 8109 (2 sh.), MNRJ 9810 (3 sh., soft parts), MNRJ 9811 (4 spc.), MZSP 39387 (1 sh.), ZMH 2960 (3 sh.).

Remarks: The paratypes from the ANSP and MNHN collections (according to PENA et al. 2011: ANSP unnumbered, 1 sh., and MNHN unnumbered, 1 sh.) are missing and were likely not received (PAUL CALLOMON, PHILIPPE MAESTRATI and VIRGINIE HÉROS, personal communications, 2016).

Thaumastus straubei COLLEY 2012

Fig. 28

2012 *Thaumastus straubei* COLLEY: 44, figs. 1–9.

Type locality: Brazil. Paraná state; Usina Hidrelétrica de Guaricana (“Guaricana Hydroelectric Power Plant”),

between São José dos Pinhais and Guaratuba municipalities (25°45'S 48°55'W).

Distribution: Known only from type locality.

Type material: Holotype: MNRJ 11890. Paratypes: MNRJ 17272 (1 spc., 6 sh., soft parts).

Family Odontostomidae

Genus *Anctus* MARTENS 1860

Anctus prolatus SIMONE & CASATI 2013

Fig. 29

2013 *Anctus prolatus* SIMONE & CASATI: 151, figs. 35–41.

Type locality: Brazil. Piauí state; Serra da Capivara, Coronel José Dias municipality, close to Sítio do Mocó town, Toca de Cima dos Pilão Cave (8°51'47.10"S 42°33'26.96"W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 112450. Paratypes: MZSP 111836 (3 sh.), MZSP 112350 (1 sh.), 112362 (2 sh.), 112372 (3 sh.).

Genus *Anostoma* FISCHER VON WALDHEIM 1807

Anostoma tessa SIMONE 2012

Figs. 30–32

2012b *Anostoma tessa* SIMONE: 435, figs. 15–20.

Type locality: Brazil. Bahia state; Santa Maria da Vitória municipality (ca. 13°24'S 44°12'W, ca. 460 m elevation).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 103914. Paratypes: MNRJ 30379 (2 sh.), MZSP 103915 (1 sh.), MZSP 103916 (37 sh.), MNHN IM-2012-37363 (2 sh.), USNM 1157008 (2 sh.).

Genus *Bahiensis* JOUSSEAUME 1877

Bahiensis ribeirensis SALVADOR, CAVALLARI & SIMONE 2016

Figs. 60–61

2016 *Bahiensis ribeirensis* SALVADOR, CAVALLARI & SIMONE: 61, figs. 11–14.

Type locality: Brazil. São Paulo state; Parque Estadual Turístico do Alto Ribeira (PETAR; “Alto Ribeira State and Tourist Park”), Alambari de Baixo Cave (entrance coordinates: 24°33'25.8"S 48°39'52.0"W; altitude 191 m).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 120774.

Remarks: Cavernicolous species.

Genus *Clinispira* SIMONE & CASATI 2013

Clinispira insolita SIMONE & CASATI 2013

Figs. 33–34

2013 *Clinispira insolita* SIMONE & CASATI: 147, figs. 2–15.

Type locality: Brazil. Piauí state; Serra da Capivara, Coronel José Dias municipality, close to Sítio do Mocó town, Toca de Cima dos Pilão Cave (8°51'47.10"S 42°33'26.96"W).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 111847. Paratypes: MNRJ 17289 (2 sh.), MZSP 111828 (84 sh.), MZSP 111829 (5 sh.), MZSP 111830 (5 sh.), MZSP 111831 (4 sh.), MZSP 111832 (5 sh.), MZSP 111833 (1 sh.), MZSP 111834 (2 sh.), MZSP 111846 (8 sh.), MZSP 112369 (3 sh.), MZSP 112426 (1 sh.), USNM 1207955 (2 sh.).

Remarks: Type species of genus.

Genus *Cyclodontina* BECK 1837

Cyclodontina capivara SIMONE & CASATI 2013

Fig. 35

2013 *Cyclodontina capivara* SIMONE & CASATI: 149, figs. 16–22.

Type locality: Brazil. Piauí state; Serra da Capivara, Coronel José Dias municipality, close to Sítio do Mocó town, Toca de Cima dos Pilão Cave ($8^{\circ}51'47.10"S$ $42^{\circ}33'26.96"W$).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 112448. Paratypes: MNRJ 17291 (2 sh.), MZSP 111837 (19 sh.), MZSP 111838 (18 sh.), MZSP 111845 (9 sh.), USNM 1207956 (2 sh.).

Remarks: SIMONE & CASATI (2013) listed the catalog number MZSP 111845 among the paratypes of both *Cyclodontina capivara* and *Rhinus gilbertus*. In reality, the lot with this number does not contain paratypes of *R. gilbertus* (see CAVALLARI et al., 2016).

Cyclodontina tapuia SALVADOR & SIMONE 2014

Fig. 36

2014 *Cyclodontina tapuia* SALVADOR & SIMONE: 484, figs. 2–7.

Type locality: Brazil. Bahia state; Bom Jesus da Lapa municipality, forest fragment on the vicinities of Bom Jesus da Lapa Hill ($13^{\circ}15'36"S$ $43^{\circ}25'20"W$).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 109684. Paratypes: MZSP 109685 (2 sh.).

Genus *Spixia* PILSBRY & VANATTA 1898

Spixia coltrorum SIMONE 2012

Fig. 37

2012b *Spixia coltrorum* SIMONE: 433, figs. 9–14.

Type locality: Brazil. Bahia state; Santa Maria da Vitória municipality (ca. $13^{\circ}24'S$ $44^{\circ}12'W$, ca. 460 m elevation).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 103920. Paratypes: MNRJ 30378 (1 sh.), MZSP 103922 (2 sh.), MZSP 103921 (1 sh.), MZSP 103923 (8 sh.), USNM 1157010 (1 sh.).

Family Simpulopsidae

Genus *Rhinus* MARTENS in ALBERS 1860

Rhinus botocudus SIMONE & SALVADOR 2016

Fig. 38

2016 *Rhinus botocudus* SIMONE & SALVADOR: 20, figs. 28–52, 68–76.

Type locality: Brazil. Minas Gerais state; Nanuque municipality, small fragment of Atlantic rainforest close to Mucuri River (ca. $17^{\circ}51'S$ $40^{\circ}23'W$, ca. 120 m of elevation).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 106174. Paratypes: MZSP 106175 (2 spc.), 106176 (10 sh.).

Rhinus gilbertus SIMONE & CASATI 2013

Fig. 39

2013 *Rhinus gilbertus* SIMONE & CASATI: 153, figs. 23–34.

Type locality: Brazil. Piauí state; Serra da Capivara, Coronel José Dias municipality, close to Sítio do Mocó town, Toca de Cima dos Pilão Cave ($8^{\circ}51'47.10"S$ $42^{\circ}33'26.96"W$).

Distribution: Known only from type locality.

Type material: Holotype: MNRJ 17292 (2 sh.), MZSP 112449. Paratypes: MZSP 111827 (27 sh.), MZSP 111835 (98 sh.), MZSP 111839 (50 sh.), MZSP 111844 (9 sh.), USNM 1207957 (2 sh.).

Remarks: SIMONE & CASATI (2013) reported the catalog number MZSP 111845 among the paratypes of *Rhinus gilbertus* and *Cyclodontina capivara*. Nonetheless, the lot with this number does not contain paratypes of *R. gilbertus* (see CAVALLARI et al., 2016).

Tucano (“Toucan Waterfall” 0°39'54.07"N 65°56'09"W, 100 m elevation).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 87151. Paratype: MZSP 87149.

Remarks: Type species of genus.

Genus *Solaropsis* BECK 1837

Solaropsis alcobacensis SALVADOR & SIMONE 2015

Fig. 55–57

2015a *Solaropsis alcobacensis* SALVADOR & SIMONE: 5, figs. 13–15.

Type locality: Brazil. Bahia state; Alcobaça municipality, Atlantic Forest fragment 2 km to the north of the city (17°30'10"S 39°11'42"W, ~10 m elevation).

Distribution: Known only from type locality.

Type material: Holotype: MZSP 107964.

Discussion

SIMONE (1999) estimated that only a third of the Brazilian land snail species were then known and described. The ca. 800 species reported shortly after (SIMONE 2006) imply a fauna of over 2,000 species. Forty-two species were described in the last 10 years, most of them stemming from scarcely studied biomes, such as the Caatinga and the Cerrado. Considering this rate of four species per year, malacologists will need over 300 years to describe the remaining unknown species. The overly-exploited natural environments in the country will not last that long. In reality, several species are becoming extinct before being known to science, in Brazil and elsewhere (SIMONE 1999, RÉGNIER et al. 2009, RICHLING & BOUCHET 2014, SALVADOR & SIMONE 2015b). It is thus clear that more taxonomic studies are urgently needed, not only to discover new species but to increase the information on the already known ones, especially for conservation purposes. Presently, only *Spiripockia punctata* is classified

by the Brazilian environmental agency ICMBio as at risk of extinction (SANTOS et al. 2015).

Acknowledgments

We are very grateful to ALEXANDRE D. PIMENTA (MNRJ), ELLEN E. STRONG (USNM), PAUL CALLOMON (ANSP) and PHILIPPE MAESTRATI and VIRGINIE HÉROS (MNHN) for providing information on some type specimens under their curatorship; to JANINE O. ARRUDA (MCN-FZB) for the help in procuring some of the literature; to the following people for providing photographs of species they described: EDUARDO COLLEY (UNILA; photographs of *Thaumastus straubei*), SERGIO MIQUEL (MACN; photographs of *Radiodiscus sanchicoensis*), SUZETE R. GOMES (Fiocruz; photographs of *Simrothula paraensis*); to JOSÉ H. LEAL, editor of The Nautilus, for granting permission to reproduce here the figure from OHLWEILER et al. (2009); to JOHN M.C. HUTCHINSON (Senckenberg Museum für Naturkunde Görlitz), DIEGO E. GUTIÉRREZ GREGORIC (MLP) and an anonymous reviewer for the helpful comments and suggestions.

Revised manuscript accepted: 13.06.2016

Appendix

Here we present new Brazilian records of native species of land and freshwater molluscs already described by 2006; most had been reported previously from elsewhere in Brazil, but some only from other countries. This updated distribution considers works published after SIMONE (2006) or those few that were not cited in it. Table 1 shows all those species, with their formerly known distributions (*sensu* SIMONE 2006) and the new records, alongside the appropriate references. The following species were not cited by SIMONE (2006): *Biomphalaria cousini* PARAENSE 1966, *Chilina megastoma* HYLTON SCOTT 1958, *Gastrocopta barbadensis* (PFEIFFER 1853), *Laevapex fuscus* (C.B. ADAMS 1841), *Omalonyx matheroni* (POTIEZ & MICHAUD 1835), *Omalonyx pattersonae* TILLIER 1981, *Potamolithus kusteri* (STROBEL 1874), *Rectartemon muelleri* (THIELE 1927); refer to the cited literature for the full distribution of these species.

In Table 1, we consider as new records only an occurrence in a different Brazilian state than previously reported. However, some species were known only from a single or few localities inside a state and their known range has been extended only within that state (e.g., BIRCKOLZ et al. 2013; SALVADOR et al. 2016). These species are not included. Likewise, new reports of non-native invasive species are not considered.

Table 1. New Brazilian records of previously known species, complementary to the catalogue of SIMONE (2006). The horizontal dash (—) indicates species previously unknown from Brazil (not reported by SIMONE 2006). A question mark following a record indicates a possible record, meaning that the species was left in open nomenclature (“cf.”) by the cited author(s). For ease of use, families are presented in alphabetical order within each broader taxon. We follow here the works of CUEZZO (2002, 2003), which treat *Psadara* MILLER 1878 as a synonym of *Solaropsis* BECK 1837, belonging to Camaenidae. The species *Laevapex fuscus* (C.B. ADAMS 1841) might be introduced in Brazil. Abbreviations of Brazilian states: AC, Acre; AM, Amazonas; BA, Bahia; CE, Ceará; DF, Distrito Federal; GO, Goiás; MA, Maranhão; MG, Minas Gerais; MS, Mato Grosso do Sul; MT, Mato Grosso; PA, Pará; PB, Paraíba; PR, Paraná; PE, Pernambuco; RJ, Rio de Janeiro; RN, Rio Grande do Norte; RS, Rio Grande do Sul; RO, Rondônia; SC, Santa Catarina; SP, São Paulo; SE, Sergipe; TO, Tocantins. Abbreviations of Brazilian islands: Cab, Cabo Frio Island (RJ); Fer, Fernando de Noronha Archipelago (PE); Gra, Grande Island (RJ); Tri, Trindade Island (ES).
